GROWN AND SOLD BY

ISAAC F. TILLINGHAST

Seed and Plant Specialist

Santa Rosa, California

To My Friends and Patrons:

SEED BUYING is a Matter of Confidence, and confidence is usually a plant of slow growth. Most people must see before they will believe.

Having myself seen, and honestly believing, that I have at least a few Novelties of such sterling merit and value that you should be interested enough to give them a fair trial; and also to induce you to test some of my improved strains of a select list of older standard varieties, I am putting this little catalogue in your hands with some special offers, with the hope that it may serve as an introduction which may later ripen into friendship and be the cause of making you a permanent satisfied customer.

If experience counts for anything I feel that I am justly entitled to your consideration, having been known for half a century as a seed and plant specialist.

Possibly you are aware of the fact that the best seeds to be had anywhere are now being grown on the Pacific Coast, and that you may not only save money on their cost but get them fresher by ordering them direct from me instead of paying a middleman's profit in some eastern city where no seeds are actually produced.

Cabbage and Tomato Seeds are two of my greatest specialties, my only brother, located up in the Puget Sound country, Washington, having been known to the seed trade generally for many years as the largest producer of cabbage seeds in America, if not in the whole world, and if you can use or sell so as to buy these in quantity I will be pleased to quote you most liberal terms.

At all events will you kindly let me hear from you with at least a small trial order for something, that we may become acquainted?

Remember that everything herein offered is delivered to your postoffice free of expense, and if you prefer not to accompany your order with check, money order, or cash, I will send any Seeds (not plants) by parcel post C.O.D., you to pay your postmaster after their arrival, providing it amounts to one dollar or more. A dollar bill may be sent at my risk. If convenient please send less amounts in one cent stamps.

EXTRA PACKETS AS SEED PREMIUMS

Every person ordering seeds from this catalogue at list prices to the amount of \$2.00 or more may select and include extra seeds in packets, to the value of 25 cents, as our good-will offering.

THE PRECOCITY POTATO

WITHOUT DOUBT THE EARLIEST POTATO IN ALL THE WORLD

Here is another veritable California Marvel. A beautiful new smooth white potato which has repeatedly matured sufficient to be of excellent baking quality in 50 days from planting.

The vines are stout and vigorous, but low in growth, soon coming into bloom with an abundance of pure white blossoms, and tubers begin forming while the plants are very small.

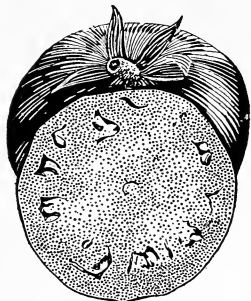

It is splendidly adapted to dry sections as its growth is made early in the season before the summer drought comes on, and yet it has proved to be a most excellent keeper.

We have a large stock of these on hand and have reduced the price as follows: Per pound, by parcel post prepaid, 40 cents. By express, 10 pounds or more at 20 cents per pound.

ISAAC F. TILLINGHAST,
Santa Rosa, Calif.

THE BURBANK TOMATO

Luther Burbank's Marvelous New Creation

BY FAR THE EARLIEST AND BEST TOMATO
EVER GROWN

Packets of about 200 Seeds 15 Cents.

Here we have the VERY BEST EARLY and VERY EARLIEST GOOD TOMATO yet known. Like most other good things, this comes as a matter of evolution. Mr. Burbank states that he has spent more than a dozen years in "evolving" this new "creation" through careful selective plant breeding, striving to see how many desirable, and how few undesirable features he could succeed in combining in one fruit.

THE BURBANK TOMATO

Excels All Other Early Varieties on the Following Counts:

1. **PRECOCITY**—Not only a few specimens, but the entire crop ripens up far in advance of all others. This season it yielded from 60 to 80 ripe fruits, average 15 pounds per plant, at one picking.
2. **SOLIDITY**—Has no open cavities, and seeds are few and small. Slices solid as a beef steak.
3. **PRODUCTIVENESS**—The entire plot yielded an average of one-fourth bushel per plant.
4. **QUALITY**—Flavor unsurpassed for eating raw. In size averages two to three inches in diameter. Ripens up perfectly without crack, spot, or blemish. Color bright red, same as "Stone."
5. **BLIGHT PROOF**—Mr. A. B. Haven, the well known Tomato Seed Grower, writes: "Mr. Burbank's claim for this variety that it is more resistant to blight, and other tomato diseases, than any other varieties, is confirmed by our experience this season, inasmuch as several other varieties growing near it have shown much more disease, in the way of blight, and dying earlier, than has the Burbank."

The following is Mr. Burbank's personal introductory claims:

THE EARLIEST TOMATO IN THE WORLD— THE "BURBANK"

"By far the earliest, smoothiest, solidest, most productive, and best of all early tomatoes; resists wilt and other tomato diseases better than most others. The 'Burbank' is so much earlier than other tomatoes that from the seed of the tomatoes which ripened here in June, a second crop has been again and again grown and ripened the same season, something probably never before known. This extreme earliness means millions of dollars to American tomato growers, as one-half the tomatoes grown in the United States, even in California, are taken by frost instead of by the grower.

"Fruit, bright crimson; thick, solid, heavy, smooth, firm, medium to large in size, superior quality, unusually heavy and continuous bearer throughout the season; best keeper and shipper. The 'Burbank' has one other unique and most remarkable quality which will be appreciated by those who like fresh sliced tomatoes for the table. Unlike other tomatoes, the skin peels freely from the rich, firm flesh."

Price: Per pkt., 15c; 2 pkts., 25c; 10 pkts., \$1.00. In bulk, $\frac{1}{4}$ oz., 50c; $\frac{1}{2}$ oz., 80c; 1 oz., \$1.50.

CORY'S THORNLESS MAMMOTH BLACKBERRY

The Greatest Horticultural Novelty of the Century

An entirely New Variety of Blackberry, of Mammoth Size and Delicious Flavor, the Canes of Which are as Free from Thorns as a Grapevine.

A Sure Winner

No one need be longer skeptical about the claims of superiority made for this novel fruit, for on another year's test, in many localities, it has more than made good in every respect, and will be planted far more extensively than ever before, both for general market and family use. Very enthusiastic reports are coming from Washington, Oregon, Texas and other widely separated sections concerning its remarkably valuable characteristics.

A Prolific Grower

Cory's Thornless Blackberry is unlike any other berry grown. The canes start to grow early in the spring, growing thick and stout until about five or six feet long, when they take the trailing habit, at which time they should be trellised. It is a prolific grower, the canes often reaching 20 to 30 feet in a season. Individual plants under favorable conditions will produce from 150 to 200 feet of cane in a season. They can be pruned to suit your fancy. When exposed to the sun the canes are a deep red color. The foliage is large, thick and of a dark green. It is not an evergreen, but some of the leaves often stay on all winter.

Photograph showing actual average size. Selected specimens can be shown three inches in length.

CORY'S THORNLESS MAMMOTH BLACKBERRY

HAS MANY DISTINCTIVE FEATURES

This blackberry blooms early in the spring and ripens its fruit three weeks earlier than most cultivated varieties. It is enormously productive. Individual plants are known to have produced 15 three-quarter-pound baskets at one picking. In size of fruit no other blackberry even approaches Cory Thornless. Berries have frequently been found measuring three inches in length, and nearly as large as a man's thumb.

Has Stood the Test

One of the oldest and most experienced commercial berry growers of the famous Gold Ridge Section, where hundreds of tons of berries of all kinds are annually produced, says: "You take no chances when you plant Cory Thornless Mammoth Blackberry. If you are going to raise berries commercially you can't afford to plant any other, and if you want them for home use you will not want any other. You will have no trouble with your pickers when you grow the Cory Thornless, as everyone enjoys picking them. They are very vigorous growers, produce a good crop when one year old, and come into full bearing at two years."

The Cory Thornless is very large, very early, and has a distinct flavor of its own, very much like the wild blackberry, and decidedly sweeter and finer in flavor than any other cultivated variety.

Almost Seedless

Another most important characteristic of this peerless new variety is that it is almost seedless, and has a core so very small and sweet that it may almost be styled coreless. As a fresh fruit, when well ripened direct from the vine to the table, it is a berry de luxe.

For cooking purposes it is superior to any other blackberry grown, as it contains much less acid than the Loganberry, making it possible to make luscious jams and preserves with

less sugar than any other blackberry on the market. And yet it has sufficient acidity to make excellent jelly.

Will Thrive In Most Any Soil

Cory's Thornless is a very hardy berry, with stronger life force, a very rampant grower, and will thrive in almost any soil, but of course its yield is commensurate with the cultivation and fertilizing which the plant receives. One acre that is bearing on Mr. Cory's place produced 700 crates of the finest fruit and about one-half the vines were used for propagating purposes. The berries are firm meat and hold up well, a most essential feature in shipping.

The young plants are propagated for market by covering and rooting the tips of canes of the present year's growth, the same as with Black Raspberries, and as they do not root freely here until after our fall rains come on, our shipping season does not commence until January and then extends until April, so Eastern and distant shipments are mostly made in the month of March for spring planting.

The plants are usually set in rows six feet apart and eight to ten feet in the row, and are trained on wires the same as Loganberries. This requires from 700 to 900 plants per acre.

In Northern climates where very severe winters prevail, the canes should be laid down in the fall and covered with leaves, straw, cornstalks or evergreen trimmings to prevent the fruit buds from freezing too severely; although it has wintered and fruited successfully on Long Island, N. Y., without any such protection.

A Sure Money Maker

As a horticultural product this sterling novelty will place more dollars to your credit than any other berry in existence.

Prices: Strong fresh plants, well packed and delivered prepaid by parcel post to any address, 3 for \$1.00; \$2.50 per dozen. By express, not prepaid, \$12.00 per 100.

HONEY DEW MELON Hybrid Casaba

The Sweetest Melon of All

This new melon of last year won the very highest praise from all. When first introduced single melons sold readily in Chicago at 75c each. This year the price is within the reach of all. Plant Honey Dew for your home garden and plant it for the market. The better known this melon is, the more will be sold each year.

Honey Dew is a medium sized melon, 5 to 6 pounds in weight, about 6 inches in diameter and slightly oblong. The skin is smooth. The color, while growing, is nearly white, and when ripe is a creamy yellow, sometimes a lemon yellow.

Honey Dew has a very thick flesh, light emerald green in color. It is fine grained, melting and delicious, and is good clear down to the rind. This is a melon which needs to be well ripened. If you are growing them yourself you will see to this. Sometimes these melons are marketed when unripe and that gives them a bad name, which they do not deserve. Honey Dew is as sweet as sugar and with a very delicious flavor—not musky at all.

The vines are strong growers and are productive. The melons slip from the vines when ripe, but may be picked just before they are ripe and stored in a cool place and then they will keep until Christmas. Pkt., 5c; oz., 25c.

SOIL IMPROVEMENT CROPS

A NEW LEGUME OF IMMENSE VALUE WHICH MAY ADD MILLIONS OF DOLLARS TO OUR NATION'S WEALTH

The Monanthos Lentil—This in addition to being a valuable cover crop and soil enricher, is also a new source of human food as nutritious as the best of beans, yet grown at far less cost, as it may be abundantly produced on poor land, which is thereby made richer for following crops. These do best when sown

in fall or winter in this state; as early as possible in spring in the northern and eastern states. Every farmer and fruit grower should try them. Price of inoculated seeds, 2-oz. pkg., 10 cents; 40 cents per pound, postpaid. Larger quantities at a special low rate.

DAKOTA GIANT MILLET

This grows from three to six feet tall, producing very large heads and larger seeds than any other millet. The seeds contain a high percentage of oil, and have a higher feeding value per pound than corn. It is immensely productive and makes fine feed for horses,

hogs, sheep or poultry. The seeds ripen before the straw, so it may be cut and bound the same as wheat or oats, threshed, and a nice green crop of hay put up, while the seed may be housed and fed separately as grain. 1-oz. pkt., 10c; 1 lb., 80c.

NEW ZEALAND SPINACH

A spreading vine with numerous branches. One plant will cover an area four feet in diameter. The tender tips may be cut every

few days and cooked as spinach; it is just as good. One pkt. is enough for a family garden. Per pkt., 10c.

TWO UNRIVALLED SWEET CORNS

No other sweet corn ever introduced found favor with more people universally than the Golden Bantam, and wholly on account of its peculiar sweetness and flavor, and naturally many experiments have been made in crossing it with other sorts with the object of improving it either in earliness or size.

I have tested a large number of such offerings and have selected two of the very best.

The Golden Dawn was put out by Livingston, of Tomato fame, as the "earliest on earth," and I believe that claim is as yet undisputed; yet it maintains the beautiful golden color and flavor of the parent. Price 10c per ounce pkg.; 60c per pound.

The Golden Giant was produced by crossing Golden Bantam and "Howling Mob," an eastern variety which made a great record on account of size and quality. This was very extensively advertised last spring at 30 cents per one-half oz. pkg., and has proved to be one of the most perfect sweet corns ever introduced. It produces ears nine inches long with kernels of a deep golden yellow of exquisite flavor. It is equal in every respect to Golden Bantam, with the added advantage of much larger ears very compactly filled. A trial will convince the most critical gardener that New Golden Giant is destined to become a very popular standard. Price 10c per oz. pkg.; 60c per pound.

NEW WHITE SEEDED KENTUCKY WONDER BEAN

In my extensive travels, selling seeds to dealers, I found that the Kentucky Wonder Bean is by far the one most popular variety in nearly all sections of the Union. Everybody knows it, and it seems as though everybody grows it. For many years it has stood peerless and unequalled as a green snap pole bean.

In the new white seeded variety, which originated here, we have the first and only great

improvement yet made on the original "Old Homestead" strain. First in hardiness and frost resisting ability it will compare with the Black Valentine, which is a most important point for the southern grower who is after the early market, as well as to northern planters. In productiveness it is unexcelled if not unequalled by any other pole bean. And then the beautiful rustless white dry beans are simply superb for winter table use. Price, 1-oz. pkt., 10c.

JAPANESE CLIMBING CUCUMBER

Take any old barrel and make holes in bottom for drainage, with a few stones or broken crockery to keep from clogging. Fill this half full of manure—horse and chicken mixed is best. Set this near your back door and dig deeply around it. Plant these seeds in a

circle around the barrel and then frequently pour in water which will soak through and keep the plants supplied. Give the vines a support of chicken wire or lath frame, and you can grow all the cucumbers any one family will want on a space five feet square. Price, 5c; oz., 15c.

BURBANK'S NEW GIANT HYBRID ARTICHOKE

One of the most astonishingly notable things to be seen in visiting Burbank's gardens is his new Giant Hybrid Artichoke which he describes as follows: "After many years, at great expense, I now offer for the first time seeds of my new hybrid artichokes. They produce heads of enormous size in greatest quantity and of superior quality. These new artichokes often produce on good soil lavender-blue flowers three to four feet

in circumference. Nothing to equal them has ever before been known. These delicious globe artichokes can be grown in the cold northern states by starting the plants early in pots or boxes in a warm place and transplanting to a good deep rich soil early in spring. The best plants can then be kept in the cellar for making offsets for the next spring's planting for a crop." The seeds we offer were grown by Burbank. Packet 20c; 3 for 50 cents.

THE LAST WORD IN MELONS

Two New Cantaloupes of Unequalled Sweetness and Flavor

For many years Rocky Ford, Colorado, has been known the world over as the Mecca for cantaloupes of highest quality, and no other known person has the credit of knowing more about them or how they are produced than Mr. D. V. Burrell, from whom we obtained the following:

Perfected Burrell's Gem—In this new melon is embodied the results of many years of critical selection by Mr. Burrell in his untiring efforts to produce the perfect melon in every detail of its makeup, size, beauty and

fine quality, and he stakes his life's reputation upon it. The seeds we offer were grown in Colorado by Mr. Burrell, who assures us that they cannot be excelled. Pkt. 10c; oz. 30c.

New Golden Fleshed Honey Dew—This also comes from Mr. Burrell as a greatly improved type of the well known Honey Dew Melon, which already had the reputation of being the sweetest melon known. If you want ne plus ultra quality in melons do not fail to try these two new candidates. Pkt., 10c; ounce, 30 cents.

SAN JOSE CANNER TOMATO

This is the variety generally grown in California for the large canneries, hundreds of acres of them in Sonoma county. It is very

large, heavy, and immensely productive; 20 tons per acre being a common yield. Pkt. 10c; ounce, 30c.

CALIFORNIA MAMMOTH PUMPKIN

These are being grown very extensively in many sections of the state for stock food; both hogs and cattle thrive on them. In size and productiveness they are simply astonishing. I have seen large fields planted on adobe land, without fertilizer, and never seeing a drop of rain or irrigation, yet producing many tons of pumpkins weighing from 25 to 150

lbs. each. As generally known they are not of a thoroughbred type, but vary greatly in color and shape, but the stock we now offer have been perfected by long selection by our grower so that they present a very uniform appearance, all being of a beautiful creamy color. Pkt. 5 cents; ounce 10 cents; pound \$1.00.

WAGNER'S GIANT CRIMSON WINTER RHUBARB

Without doubt the largest and hardest rhubarb ever introduced. The average stem is 1½ feet long and weighs ¼ pound, being about double the size of the old Crimson Winter, from which it was derived. It is remarkably

hardy, being at its best in midwinter in this climate and will prove a sure money-maker for all who plant it. Seeds from original stock plants, 15 cents per pkt. Strong subdivision roots, each 25 cents, \$2.50 per dozen.

GIANT SUDAN SORGHUM

A WONDERFUL NEW FORAGE GRASS

Sudan Grass has now been well tested in many sections and found to be very drought resistant and more productive than any other forage plant ever before known. And now through a natural cross of Sudan with a sweet sorghum, probably Amber Cane, a really wonderful new grass has been produced, which from reliable reports yields 75 tons of sweet, nutritious silage per acre. It is a hardy

annual growing 14 feet in height and as thick as a cane brake. It may be grown with great profit wherever corn can be grown and may be harvested two or three times during the season. Plant and cultivate same as sorghum. The seeds are much larger and heavier than ordinary Sudan grass, more resembling cane seeds and are produced in the greatest profusion on plants left standing. Per oz. pkt. 20 cents; pound 65c.

NEW GOLDEN GIANT POULTRY BEET

The one thing the successful egg producers of California do not neglect is to grow an abundance of the right kind of green food which is kept before the laying hens constantly at all times.

For winter use nothing is superior to the New Golden Giant Poultry Beets for this purpose. The seeds may be planted here at any time from January to June, and the roots

gathered and stored in December, or may be left in the field until wanted in most sections where the ground does not freeze solid. This variety contains more sugar than any other stock beet, and is very rich in protein. A great saving in grain feed is made by its use. It is immensely productive, 50 tons per acre being not an uncommon yield. Price, 1 oz. pkt., 10c; pound, 65c.

HOGAN'S HARDY CHICKEN LETTUCE

Our most successful poultrymen find that little growing chicks require lots of green food as well as the old laying hens, and Lettuce seems better adapted to their use than cabbage or kale. They are very fond of it, and it seems to supply just what they need.

Hogan's New Hardy Chicken Lettuce is rapid growing and very bushy and spreading in its habits, producing big loose heads which are easily gathered and fed to the young growing chicks. It is very hardy and will grow out all winter when the ground does not freeze solid. Pkt. 5c; oz. 15c.

RELIABLE SEEDS AT HONEST PRICES**A Very Select List of Most Approved Varieties**

Everything offered in this list will be delivered by Parcel Post to any address. We aim to sell Satisfaction as well as Seeds, and you may expect prompt service by return mail, so distance is no objection or barrier. Please favor us with a trial order. Most of these have been grown by or for us on the Pacific Coast.

AMERICAN GROWN CABBAGE SEEDS

"Better Seeds for Less Money"

I have been a cabbage specialist for many years and have sold thousands of pounds of seeds and millions of plants to satisfied customers in all sections of the Union. These seeds are grown in the Puget Sound section of the State of Washington.

The reason why you have heard nothing about them in recent years is that we have been growing on contract exclusively for the largest and most critical seed houses who sell them under their own name and brand, but the business has grown until some 400 acres will be harvested next summer, and I am now in position to again supply individuals.

So I now desire to get in touch with every grower of plants who is or will be in the market for "better seeds for less money," than he is now getting.

The following varieties only are in stock here for immediate delivery.

Copenhagen Market—In all respects the best early market cabbage I ever grew. It was originally imported from Denmark and has gained great popularity in this country.

Early Jersey Wakefield—This has been the standard early market cabbage in this country for many years. Our seed stock came originally from Peter Henderson, who was the first to introduce it.

Charleston Wakefield—We were the first to introduce this now very popular strain which originated as a sprout from the Early Wakefield by being grown and seeded continuously for a number of years in the Puget Sound country, where the long cool seasons caused it to become larger and later than the original Henderson stock.

Early Winnigstadt—Of German origin and for many years the most popular second early sort in this country.

Premium Flat Dutch—A well known popular late variety, comparatively slow growing, but sure heading. The plants are exceptionally vigorous and hardy, with large spreading leaves.

Improved Danish Ballhead—The greatest market cabbage for the reason that it will stand up longer and bear handling and shipping better than any other variety. Hundreds of carloads are grown and wintered over in New York State and sent to distant markets in early spring.

Henderson's Succession—This is a very popular variety for intermediate or general use at any season of the year.

Prices: We offer all the above at a uniform price, 5 cents per pkt., 15 cents per ounce, \$1.50 per pound, postpaid. Write for special quotations on larger quantities.

AMERICAN GROWN CAULIFLOWER SEEDS

Do you know that all the large seed houses in this country have up to this time procured their cauliflower seeds from Europe—mainly from Germany and Denmark?

California and Washington are the only states in the Union that have successfully grown any, and they only in small quantities, and mostly late sorts.

I can now supply the finest strains of Henderson's Early Snowball from Puget Sound; Danish Dry Weather, very similar, but somewhat larger and later, imported direct from Denmark, and California Wonder, grown here

in California. All at the uniform price, 10 cents per pkt., \$1.00 per ounce.

California Wonder Cauliflower

This is a large growing, hardy, late variety, somewhat resembling Kale or Broccoli in its earlier stage of growth. Here in California these seeds are sown in August or September, and the plants set out in October or November, where they stand, making a slow but steady growth all winter, and produce beautiful large solid white heads about April or May. Pkt., 10 cents.

GILA MONSTER, OR GIANT AZTEC BEAN

A Relic of the Stone Age

Did you ever see "common white field beans" grow as big as Robin's eggs?

Well, I have a very interesting story to tell you about such a product. In my world-wide search for wonderful new creations I have struck something not only very curious and interesting but so far as I can learn and judge a thing that will prove of inestimable value to the world at large. And this I will have to describe under the paradoxical title of an antique novelty—a new thing which is undoubtedly very, very old.

Of course you have read of the finding of skeletons of Gila Monsters, Mastodons, and other enormous animals which existed in parts of this country away back in pre-historic days, the likes of which have never been equalled in modern times, but did you know that vegetables as well as animals once also grew to such enormous proportions as to be almost beyond belief?

Well, here we have a round white bean not at all uncommon in appearance except that they grow so large that 18 of them selected, or about 20 as they run will weigh a full ounce. For comparison I just counted one ounce of our common field pea-beans and found 166, which shows these Giant Aztecs to be eight or nine times as large. And as to productiveness I doubt if it can be equalled by any other known variety.

The gentleman from whom I obtained my limited stock says that only two years ago he secured four beans, the product of which he replanted last spring and this fall harvested 240 pounds of dry beans. Not realizing their scarcity and consequent value for seed purposes, and finding them unusually palatable, most of these have already been consumed as food.

But the most interesting part of my story, which concerns the origin of this modern wonder, has not yet been told. Of course I cannot vouch for the truth of this, but the claim that has been passed down with these beans is that they were originally found embedded in volcanic lava or fused adobe exhumed from mounds of the pre-historic men of the stone age, so sealed that their vitality may have been preserved for ages, but have acquired their name from the fact that they have been more recently cultivated by the Aztec Indians of Mexico who are great adepts in the cultivation of beans.

Price per pkt., 25c; ounce, 50c.

SOME WONDERFUL FLOWERS

ASTERS IN VARIETY

Do you know that California is producing some of the most wonderfully beautiful forms of Asters known to the floral world? Try some of the following and see for yourself. Per pkt. 15 cents, 2 for 25 cents, 10 for \$1.00.

51. Aster—Semple's Branching, mixed colors.
52. Aster—Queen of the Market, mixed colors.

53. Aster—Giant Comet, mixed colors.

54. Aster—Ostrich Feathered, mixed colors.

55. Aster—Large Chrysanthemum flowered, mixed colors.

56. Aster—King, mixed colors.

6. Aster—General mixture of all the above.

PANSIES

Steele's Mastodon—This superb strain of pansies is grown and seeded in Oregon and Washington to greater perfection in size and wonderful forms and colorings than elsewhere in all the world. We offer the following varieties at 25 cents per pkt., 5 pkts. for \$1.00.

57. Adonis—Lovely sky blue.

58. Bronze Mastodon—Very large with different shades from burnished brass to gold.

59. Madame Steele—Elks' purple of fine form and enormous size.

60. Panama Pacific—Huge, deep yellow; so:ae with dark center, and some without.

61. White Mastodon—Snow white with dark center, very large and beautiful.

39. Mastodon Mixed—A wonderful collection of rich velvety shades in greatest variety.

SPENCER SWEET PEAS

Their easy culture, freedom of bloom, delightful fragrance and artistic appearance combined with their splendid cut-flower qualities make them one of the most desirable flowers for the general public.

Spring sowings should be made as early in the spring as the soil conditions permit. Here in the Coast regions they can often be planted in February. The Spencer type is by far the best, and we do not carry the Eckford types except in the Rainbow mixture, which is partly made up from that type.

Prices on Sweet Peas—Unless otherwise noted are uniformly as follows: Pkt. 5c; 1 oz. 30c.

Novelties

62. Florence Morse Spencer—White and blush pink edge.

63. King Edward Spencer—Extra large flowers of deep rich carmine scarlet. Often four flowers on a stem.

64. King White—Usually four giant flowers to the stems and pure glistening white.

66. Rainbow Mixture—Carefully blended and contains a great variety of colors. This mixture contains some Spencers but is mainly grandiflora type. Pkt. 5c; oz. 30c; ¼ lb. \$1.00 postpaid.

65. Queen Alexander Spencer—A beautiful giant scarlet, touched with fiery red. It is sunproof and the long stems carry extra large flowers four to the stem.

BURBANK'S NEW CALIFORNIA POPPY

"PAPAVER CALIFORNICUM"

This seed is directly from Mr. Burbank, is an improvement on the well-known state flower of California, and he says is one of the most beautiful of all Annuals, fifteen inches

high, producing flowers on long slender stems of colors rarely seen in any flower. Pkt. 20c; three 50c.

HELIOTROPE "MIDNIGHT"

The stems are black as ink; the foliage beautiful bronze green; so dark as to be almost black. The flowers are a lively shade of

purple, variegated with white and lighter purple. Very rare and beautiful. Pkt. 25 cents.

DAHLIA IMPERIALIS—"The Lily Dahlia"

A distinct species, the most beautiful of all Dahlias. It grows 10 or 12 feet high and bears panicles of lovely lily-like flowers, measuring eight inches from tip to tip of petals. The

color is a delicate mauve, almost white, veined with old pink. It blooms from seed the first year in November, true to type. Pkt. 25c.

BURBANK'S MAYFLOWER VERBENA

Mr. Burbank says that this is by both European and American growers known as the best selected and most fragrant strain. It produces extremely large flowers in wonder-

ful bright shades of pink, scarlet, rose, blue, lavender, crimson, purple and white. Pkt. 20c; three 50c.

FLANDERS POPPY, Most Sentimental Flower

Like the spirit of France, proclaiming it shall never die, the Crimson Poppies in flaming dress, intersperse the Flanders fields, where our courageous ones are laid to rest.

This worthy introduction, destined to become one of America's favorites, is one which will continually remind us of our boys who so valiantly gave "Their All" for the right of democracy. Price: pkg., 10c.

POPPY, "FAYAL"

Grown by Mrs. Theodosia B. Shepherd, who says it is the most beautiful and dainty of all dwarf poppies. The flowers are every imagi-

nable shade of red, pink, maroon and white, single and double. **Pkt. 15 cents.**

ROSA "POLYANTHA PLENA"

"Little Midget" or Baby Rose. Dainty, curious and beautiful. Blossoms the first summer

from spring sown seeds. **Pkt. 25 cents.**

SINGLE PETUNIAS**"GIANTS OF CALIFORNIA"**

This new strain bears gigantic flowers, often five or more inches in diameter, and of an astonishing variety and beauty of colors. They embrace every conceivable shade of crimson, pink, lavender, yellow, black, pure white, etc. One of the chief points of excel-

lence is the deep throat and diversity of veining in the throat. Many of the flowers have a clear yellow throat, while others have a pure velvety black one, so deep that it seems to show no veining. The flowers are beautifully ruffled and filled. **Pkt. 25 cents.**

THE NEW GIANT MOONFLOWER**A VERY RARE AND VALUABLE NOVELTY**

This greatly improved variety of the popular Moonflower Vine, produces much larger flowers and in greater profusion. If grown in well enriched soil in a warm, sunny location and given sufficient water while making growth, the vine will attain a height of from 60 to 75 feet during the summer season, and be covered with large bluish green heart-shaped leaves, and will be studded from July until frost with immense saucer-shaped flowers from 7 to 8 inches across as glistening

white as disks of white satin, bordered with a beautiful soft lavender color. This is a perennial plant, springing up annually from bulbs which at one year old weigh from one to two pounds, and at two years are sometimes as large as a 12-quart bucket. They are also softly fragrant. The flowers open about sunset, close the next morning, though on cloudy days they remain open until noon. The effect, particularly on moonlit nights, is entrancingly beautiful. **Pkt., 20 cents.**

WONDERFULLY BEAUTIFUL GLADIOLI**BURBANK'S NEWEST HYBRIDS**

Luther Burbank says of these: "For over forty years Gladioli have been one of my specialties, and the foundation of some of the most popular strains originated with me decades ago. During the past few years wonderful new combinations of colors and shades never before seen in any flower except the tropical orchids have appeared in bewildering variety and abundance so that it is no longer possible to give them names, for the

tender transparent orchid shades blend in endless poems of color. When you plan Gladioli get the very newest and best if you desire to see what can be accomplished by forty years' rigid selection. Among these some really wonderful prizes will be drawn."

Having been fortunate in securing from Mr. Burbank a limited stock of bulbs of this marvelous new creation. I offer them at the following very reasonable rates: **Each 15 cents; per dozen \$1.50, by prepaid post.**

THE BURBANK CALANDULA OR WINTER MARIGOLD

One of the finest hardy annuals, blooming all summer, and in California and other mild climates nearly all winter, when other flowers are scarce. Handsome double orange, yel-

low, creamy-white and variegated colors. These will be widely used for decorative purposes. **Pkt. 10 cents; 3 for 25 cents.**

A NEW MORNING GLORY**"BURBANK'S GIANT CRIMSON"**

One of the largest and most beautiful of all Morning Glories. Attracts attention wherever seen. **Pkt. 10 cents.**

BOSTON OR JAPANESE IVY (Ampelopsis Veltchi)

The popular ivy which covers so many buildings. It clings to brick and wood without support. The leaves are heart-shaped and

are off the vine for only two months in the winter. **Pkt. 10c.**

CONVOLVULUS MINOR, DWARF MIXED

A beautiful hardy bedding and border plant, attaining a height of about one foot. **Pkt. 10c.**

NOVELTIES AND SPECIALTIES IN FLOWER SEEDS

“Say It With Flowers”

“NOTHING IN LIFE IS GREATER THAN LOVE; NOTHING
SWEETER THAN FLOWERS.”

Here are fifty of the most beautiful and popular subjects, carefully selected and brought together from many lands. All are of easy culture and quick to flower, and will reward you abundantly for the little care and attention required to perfect them.

Price 10 cents per packet; 5 for a “quarter” or 25 for \$1.00, unless otherwise marked.

1. **Acroclinium.** (Everlasting). A showy free flowering annual, rosy pink in color.
2. **Ageratum.** (Floss Flower). A continuous bloomer, excellent for edging. White and blue mixed.
3. **Alyssum.** (Sweet Scented). Very popular; of easy culture and always in bloom.
4. **Amaranthus.** (Love Lies Bleeding). Long, drooping crimson racemes. 3 feet in height.
5. **Antirrhinum.** (Snapdragon). Splendid alike for beds, borders and cut flowers.
6. **Asters.** A superb mixture of most modern types for cut flowers. See page 6 for varieties.
7. **Balloon Vine.** (Love-in-a-Puff). Dainty white flowers followed by balloon-like pods.
8. **Balsam.** (Lady's Slipper). Old fashioned flowers greatly improved; very double; brightest colors.
9. **Calendula.** (Pot Marigold). New double; of easy culture; very long in bloom.
10. **Candytuft** (Iberis). Low profuse flowering annual; an early and constant bloomer.
11. **Cardinal Climber.** (Cypress Vine). A very rapid grower producing brilliant fiery red flowers.
12. **Carnation.** (Marguerite). Early flowering annual; beautiful double fragrant flowers.
13. **Celosia Cristata.** (Crested Cockscomb). Large brilliant curious crested comblike heads.
14. **Centaurea.** (Cornflower). The “Bachelor's Button” of our Grandmother's days.
15. **Cleome Pungens.** (Spider Plant). Covered with very curious and beautiful rosy pink flowers.
16. **Cosmos.** (“Midsummer”). Early flowering; profuse and long continued bloom.
17. **Convolvulus Major.** (Japanese Imperial Morning Glory). Rapid climber; 15 feet.
18. **Dahlia.** Double and single mixed. Seeds sown early will bloom in September in great variety.
19. **Dianthus.** (Double Annual Pink). Constant bloomers; many beautiful colors mixed.
20. **Digitalis.** (Foxglove). Long spikes covered with beautiful tubular-shaped flowers.
21. **Eschscholtzia.** (California Poppy). Burbank's improved; many rare and beautiful colors.
22. **Gomphrena.** (Globe Amaranth). A very useful “everlasting” for winter bouquets.
23. **Heliotrope.** Delightfully fragrant flowers of many brightest colors mixed.
24. **Helichrysum.** (Strawflower). One of the most popular of the “everlasting” class.
25. **Hollyhock.** Showy biennials; single and double; bloom first season if started early.
26. **Kochia.** (Mexican Fire Bush). Feathery green foliage turning fiery red in autumn.
27. **Larkspur.** Tall double stock flowered annual; strikingly bright and beautiful.
28. **Linum.** (Scarlet Flax). Dwarf and compact plants; ideal for bedding; very brilliant.
29. **Lupinus.** Popular free blooming, pea-shaped flowers; blue and white colors mixed.
30. **Marigold.** Double dwarf French; new types and tints mixed; fine for bedding.
31. **Mignonette.** Very fragrant; sweet and beautiful for beds, borders and cutting.
32. **Mirabilis.** (Marvel of Peru). Also known as “Four O'clock.” Small flowers in great variety.
33. **Moonflower.** (Ipomoea Noctiflora). A rapid climber producing large fragrant flowers.
34. **Mysotis.** (Forget-Me-Not). Half hardy perennial; large bright blue flowers in clusters.
35. **Nasturtium.** Well known profuse bloomers. Tall and dwarf varieties separately. Oz. 25 cents.
36. **Nicotiana.** (Flowering Tobacco). Gives a constant display of brilliantly colored flowers.
37. **Nigella.** (Love-in-a-Mist). Beautiful foliage covered with curiously shaped flowers.
38. **Oenothera.** (Evening Primrose). An old favorite; elegant for borders and rockeries.
39. **Pansies.** Steele's Mastodon. Unexcelled for size and great variety of colorings.
40. **Petunia.** Hybrid single mixed; immense in size; some beautifully frilled and ruffled.
41. **Phlox Drummondii.** Nothing can surpass these for brilliancy and profusion of bloom.
42. **Poppies.** A superb mixture of annual flowering types gathered from many lands.
43. **Phacelia Tanacetifolia.** Bright dainty flowers very rich in honey; great for bees.
44. **Salpiglossis.** (Painted Tongue). A profusion of beautifully tinted and curiously veined flowers.
45. **Stokesia.** (Stoke's Aster). Magnificent large blue and white flowers; very rare.
46. **Sweet Peas.** “All Summer.” Remarkable for great size and long continuance in bloom.
47. **Verbena.** “Mayflower.” Largest flower clusters; wonderfully bright and sweet scented.
48. **Vinca.** (Madagascar Periwinkle). Bright single blossoms of striking beauty and form.
49. **Zinnia.** (Youth and Old Age). Largest Dahlia flowered; many brilliant colors mixed.
50. **Wild Garden.** A great variety of native and foreign annuals. Sowed broadcast in an out of the way place this will give a wonderland effect and keep you guessing what you may find next that is new to you.

ITALIAN BEES AND QUEENS

Bees are a necessity on every Fruit farm to properly fertilize the blossoms and make them fruitful.

Many kinds of apples, pears, cherries and prunes are sterile to their own pollen. That is the pollen must be brought from some other tree in order that it may be available in fertilizing the blossoms, otherwise the small fruits soon drop.

We know of many instances where one hive of bees per acre placed right in the orchard have more than doubled the yield of fruit.

We breed and sell pure Italian Bees for this purpose and can supply at any time fine strong colonies.

Price, \$8.00 each; two or more hives to one address, \$7.50 each. Young fertile Queens, \$1 each.

HUBAM CLOVER

Wonderful New Clover That Will Revolutionize Agriculture

Hubam is the new fast growing clover about which so much has lately been published in the agricultural press. With the exception of Hubam, all the common clovers are biennial or two-year clovers, make only a small growth the first season, go into a dormant state the following winter, and complete their growth, mature seed, and die the next summer. In contrast to this, **Hubam Clover** continues its growth until it reaches a height of 4 to 8 feet, and often higher, and matures its seed and dies, all within one season. Through the use of Hubam as a substitute for other clovers, one year can be saved in the ordinary farm rotation. It is doubtful if any other plant known will grow successfully in wider variations of soil and climates than will Hubam Clover. Growths of from 7 to 10 feet have been reported from nearly every state. It can be pastured in 30 days from seeding, and a good hay crop obtained in three months. Its drought resisting qualities are remarkable, and the hay is apparently equal to the best alfalfa, cures rapidly, and stock like it fine. Sow 10 lbs. of seed to the acre. 50c per lb., postpaid; 3 lbs. or more at 40c per lb., postpaid.

Hybridized Potato Seed From the Seed Balls

THE WONDER OF POTATO GROWERS, THE AMAZEMENT OF GARDENERS AND A PUZZLE TO SCIENTISTS

EVERY SEED WILL POSITIVELY PRODUCE A NEW AND DIFFERENT VARIETY OF POTATOES

My Unrivalled Potato Seeds from the Seed-Ball is the wonder of the Vegetable World. There is nothing like them. No product of the Garden so interesting—none may prove of such value.

All valuable New Potatoes are produced from such seeds.

The Seedlings will be all colors, shapes, sizes and qualities, often 100 to 200 Potatoes in a hill. There will be white, yellow, pink, red, blue, purple and black Potatoes. The seed seems to go mad and try to produce anything and everything in the Potato line. Very strange and marvelous "freaks" often appear.

Potato Seed Balls are vanishing. Millions never saw one. Thousands have tried in vain to get the seed—willing to pay any price. Now is your opportunity. Get them while you can. They may soon be gone forever.

The World greatly needs a better potato—one blight-proof, rot-proof, in fact a perfect Potato. It can only be obtained from such seeds as I offer you. Your chance is good as any. Produce a better Potato and you will reap a golden harvest and confer a priceless blessing on the world.

Large packet, over 100 Selected Seeds, with full directions, only 15 cts; 2 for 25 cts.

BURBANK'S NEW SORGHUM POP CORN

A STRANGE COMBINATION

Here is an instance where a valuable new variety has been produced by crossing two distinct species of plants, a very strange and unusual accomplishment.

Stowell's Evergreen Sweet Corn, a purely American product, was pollinized with pollen from Gooseneck Kaffir Corn, a native of Africa of an entirely different species, and the

resulting cross by continued selection and breeding finally developed into one of the finest varieties of Pop Corn known.

I find this new Sorghum Pop Corn to be immensely productive, easily grown, and altogether one of the best varieties I have ever grown for either home use or commercial purposes. Price, per pkt. 10c; oz. 25c.

THREE GREAT SEED COLLECTIONS

TEN PACKAGES OF FRESH RELIABLE SEEDS FOR ONLY 35 CENTS

We want every person who receives this catalogue to try our Seeds, and in order to induce them to do so we offer these collections at the bare cost of putting them up, ten packages by mail postpaid for only 35 cents.

1. Ten packages of Vegetable Seeds, 35 cents.

Beet—Detroit Dark Red. An ideal beet unsurpassed for all practical purposes.
Cabbage—Copenhagen Market. The most popular early cabbage known.
Carrot—Chantenay. The best variety grown for general family use.
Cucumber—Perfection Evergreen. An improved type of the "Davis Perfect."
Lettuce—Iceberg. Unsurpassed for home use either fresh or pickled.
Muskmelon—Burrel's Gem. The finest of the celebrated Rocky Ford type.
Parsley—Champion Moss Curled. Most beautiful and dainty for garnishing.
Parsnip—Palo Alto. A new highly improved hardy strain from Holland.
Radish—White Icicle. Most popular in all sections of the country.
Turnip—Purpletop White Globe. Well known and highly prized everywhere.

2. Five packages Vegetables, five Flowers, 35 cents.

Rutabaga—King of Swedes. Rich hard yellow flesh of the finest quality.
Spinach—Triumph Thick Leaved. Very long standing thick fleshy leaves.
Swiss Chard—"Asparagus Beet" Most highly appreciated where known.
Tomato—Matchless. Finest of all standard varieties for family use.
Radish—Early Bird. The sweetest and quickest forcing radish known.
Mexican Fire Bush—Quick growing symmetrical plant, fiery red in autumn.
Nigella—"Love-in-a-Mist." Has curious flowers on fine cut green foliage.
Poppies—A great variety; brilliant flowers of various form and color.
Zinnia—Large Dahlia Flowered. Greatest variety of most brilliant flowers.
Wild Garden Flowers—An unsurpassed mixture of hardy annuals from all countries.

3. Ten packages of Popular Flower Seeds, 35 cents.

Ageratum—Beautiful hardy annuals in bloom nearly all summer.
Alyssum—Very dainty, fragrant flowers suitable for borders.
Amaranthus—Ornamental foliage covered with long drooping crimson recemes.
Balloon Vine—Dainty white flowers, followed by balloon-like seed pods.
Balsam—Improved strains of the "Lady Slippers" that Grandmother loved.
Calandula—Beautiful annual of easiest culture; always in bloom.
Candytuft—Dwarf profuse flowering annual, much used in beds and borders.
Cardinal Climber—Fiery cardinal red miniature morning glory, grows 30 feet.
Mignonette—Quick growing hardy annual; beautiful fragrant flowers.
Moon Flower—Evening Glory. A rapid climber producing large fragrant flowers.

The above collections purchased at any store would cost you \$1.00 each. We will mail them to any address for only 35 cents each, or the three collections for only 75 cents.

No changes can be made in these, but you may add any other seeds from my catalogue at regular rates.

4. Ten packages of your selection for 50 cents.

If the above collections do not suit you, you are at liberty to make your own selection from the thirty varieties of Vegetable and Flower Seeds named above, of Ten Packets for only 50 cents.

All the above are in full sized colored lithographed packets, with cultural directions printed on each, and will give perfect satisfaction to each purchaser.

Our only object in making these most liberal offers is to induce you to test our seeds, believing that you will then become a permanent customer.

A RARE AND WONDERFUL NOVELTY

ODOROUS TREE FERNS

Perfect Marvels of Indescribable Fragrance. Delightful for Out-Door Culture.
Charming for House Plants. Don't Miss These Perfumed Beauties.
Nothing Like Them in the World.

Every Lover of the Rare and Beautiful should grow these delightful Ferns. They are the wonder of the Floral World. Are of easiest culture—in any soil or situation—out or in doors. Height 4 to 5 feet. Foliage is exquisite, very delicate and lace-like. No bouquet or vase is complete without them.

A Thing of Beauty Is a Joy Forever

The Entire Plant is deliciously fragrant. Its perfume is the most wonderful—the most lasting of anything in nature. Sprays kept in a room or trunk will impart sweet perfume for many years.

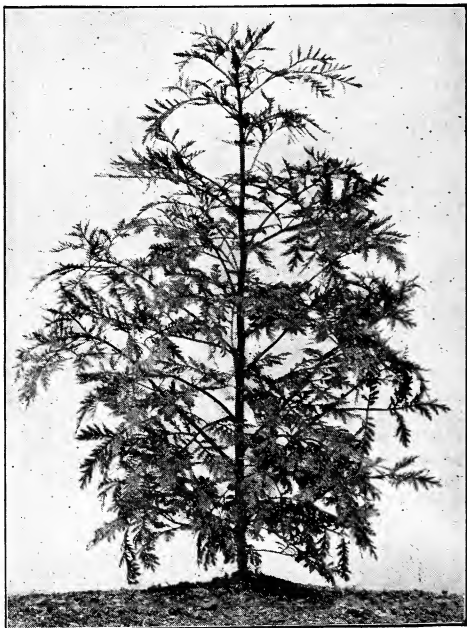

Tree Ferns are annuals—growing readily from seed. Plant in Spring for out door and in Summer or Fall for pot culture.

Every Packet Will Positively Produce 20 or More Lovely Ferns

Read This—Mrs. H. Overton of Oregon writes: "I never had anything I enjoyed more than your Odorous Tree Ferns. Mine grew 6 feet; beautiful and fragrant beyond description."

Mrs. W. L. Gasche, of Michigan, writes: "Your Fragrant Tree Ferns are certainly beauties. Three feet high, full of blossoms and so wonderfully fragrant. They took first prize at our County Fair."

Packet, 25 Cts.—5 for \$1.00

ROYAL GIANT BLACK WALNUT TIMBER TREE

Here is something that many people would be interested in if they would investigate and consider what it may mean to those who are alert enough to see an opportunity and grasp it.

A Missouri farmer thought he had "skinned" a stranger by selling him a walnut tree in the pasture for \$25.00.

The stranger cut and sold it for \$600.00.

Ordinarily it requires nearly fifty years for our native Black Walnut trees to make a growth of twelve inches in diameter, so regardless of fabulous prices, starting a plantation of them does not look like a get-rich-quick proposition.

But now I want to tell you of something that seems almost miraculous: Both Luther Burbank and J. B. Wagner, well known expert horticulturists, are propagating a new seedling walnut timber tree for which most astonishing claims of rapid growth is made, and in addition to

this they bear nuts of commercial value when very young.

Mr. Wagner reports that a single tree grown in his nursery six years from planting, measured over two feet in diameter at the base. A representative of the Department of Agriculture in viewing it for the first time, said that it was of the most extraordinary growths that had ever come under his observation and recommended its extensive planting for timber culture.

The original parent tree is now fourteen years of age, and is over three and one-half feet in diameter; decidedly the strongest growing hardwood tree in existence.

I have arranged with Mr. Burbank to supply one year seedling trees, direct from his nursery, at 60c each, or two for \$1.00.

Nuts for seed, 5c each, regardless of quantity.
